789th ENGINEER PETROLEUM DISTRIBUTION COMPANY

The 789th left Newport News on the U.S. General Butner on April 24 or 25th, 1944, first stop Capetown, South Africa, for a few hours leave. Next, on to Dur-bin, Africa, then on to Bombay. Then we took a train to Calcutta. We then went to Budge Budge. The pipeline was already in operation. The 789th took over operation of about 375 miles of line. We could not get the expected volume so we started checking pressures along the line. Many parts had pressure which was not acceptable, so in low pressure areas we started to run what we called "Rabbit" in the line which called for digging up the line, breaking joints and installing rabbit, start pumping and push rabbit until it would go no further, dig, remove clean pipe and replace rabbit, connect pipe and pump again. This went on for weeks. It was finally decided to start at No. 1 Station and clean it all. Some times we might get a mile or more, and sometimes two or three pipe lengths. The Second Station, called 1A, was approximately 60 miles from Budge Budge. It has been said in previous Roundups that gas was pumped from Calcutta. Gas was pumped from Burma Shell tank farm in Budge Budge located about 25 miles down the Hooghly River from Calcutta. We cleaned pipe to Station No. 2.
